

24. Wire Free Door Holder

SAVES LIVES AND PROTECTS BUILDINGS WHILST ALLOWING FREEDOM OF ACCESS.

Wire Free Electromagnetic Fire Door Holders

'SALAMANDER' is a system of battery powered, electromagnetic fire door holders linked by radio signals to a central controller. The controller is mains powered and is linked into the building's fire control system. The system enables fire doors to be legally held in an open position to give ease of access through a building, in compliance with the Disability Discrimination Act. Unlike conventional electromagnetic fire door holders, no wiring has to be run through the building, making the system cost effective and convenient to install.

FAIL SAFE

- ◆ Automatically releases all fire doors when fire alarm sounds
- ◆ Self-monitoring of RF signal, battery and mains supply
- ◆ Automatic daily release of some or all doors at a programmable time.

NO MORE CABLES

- ◆ Labour costs reduced by 90%
- ◆ Minimum of disruption

EASY INSTALLATION

- ◆ No unsightly cables
- ◆ Fitted easily and quickly
- ◆ Mobile - can be moved to individual doors as needed
- ◆ Booster facility for large installations

BATTERY POWERED

- ◆ User friendly controls
- ◆ Straight forward commissioning
- ◆ No external moving parts
- ◆ Step by step installers guide

SAFE AND COMPLIANT

- ◆ Eliminates illegally wedged open doors
- ◆ Improves wheelchair access in line with Disability Discrimination Act
- ◆ Reliability and robustness against false alarms
- ◆ Suitable for normal and noisy environments
- ◆ Complies with BS EN 1155 & ETSI 300 220 (Licence exempt)
