

4. Master Key System

Solve the problem of too many keys

A master keyed system allows different groups of people or individuals to gain access to all or individually defined areas of a building. For example, within the Nursing or Care Home environment, cleaning staff may have access to bedrooms and store rooms but the manager may have access to all rooms.

Universal Hardware Direct is able to provide a Master Keyed system to suit most applications. A Master Keyed system, when applied to Bedroom locks, also meets the Care Standard requirement for “access in the event of an emergency” by allowing staff to override locked bedroom doors.

34-1067

Master Keyed systems can be incorporated into the building at any time during its life.

Option exists in providing a patented system to stop any illicit duplication of Keys which would compromise the Master Keyed system
